110	MITALI	ANDHERI	4500	4-9-95
111	RAJIV	NEHRU PLACE	7000	2-10-98

5. Display all the documents of 'VIRAR' branch from Deposit collection.
6. Display all the documents of Deposit collection whose amount is between 3000 and 5000.
7. Display all the documents of Deposit collection whose amount is greater than 2000 and branch is VIRAR.
8. Display all the documents with CNAME, BNAME and AMOUNT fields from Deposit collection.
9. Display all the documents of Deposit collection on ascending order by CNAME.
10. Display all the documents of Deposit collection on descending order by BNAME.
11. Display all the documents of Deposit collection on ascending order by ACTNO and descending order by AMOUNT.
12. Display only two documents of Deposit collection.
13. Display 3rd document of Deposit collection.
14. Display 6th and 7th documents of Deposit collection.
15. Display the count of documents in Deposit collection.

Part- B

1. Insert following documents into "Student" collection. (Use: insertMany())
- ```
{ "_id": 1, "name": "John", "age": 30, "city": "New York", "isActive": true }
{ "_id": 2, "name": "Jane", "age": 25, "city": "Los Angeles", "isActive": false }
{ "_id": 3, "name": "Tom", "age": 35, "city": "Chicago", "isActive": true }
{ "_id": 4, "name": "Lucy", "age": 28, "city": "San Francisco", "isActive": true }
{ "_id": 5, "name": "David", "age": 40, "city": "Miami", "isActive": false }
{ "_id": 6, "name": "Eva", "age": 23, "city": "Boston", "isActive": true }
{ "_id": 7, "name": "Nick", "age": 38, "city": "Seattle", "isActive": false }
{ "_id": 8, "name": "Sophia", "age": 27, "city": "New York", "isActive": true }
{ "_id": 9, "name": "Liam", "age": 32, "city": "Los Angeles", "isActive": false }
{ "_id": 10, "name": "Olivia", "age": 29, "city": "San Diego", "isActive": true }
```
2. Display all documents of "Student" collection.  
3. Display all documents of "Student" collection whose age is 30.  
4. Display all documents of "Student" collection whose age is greater than 25.  
5. Display all documents of "Student" collection whose name is "John" and age is 30.  
6. Display all documents of "Student" collection whose age is not equal to 25.  
7. Display all documents of "Student" collection whose age is equal to 25 or 30 or 35. (using \$or as well as using \$in).  
8. Display all documents of "Student" collection whose name is "John" or age is 30.  
9. Display all documents of "Student" collection whose name is "John" and city is New York.  
10. Display name and age of students from "Student" collection whose name is "John" and city is New York.

**Part – C**

1. Display name of students from "Student" collection whose age is between to 25 and 35 and sort output by age in ascending order.  
2. Display all documents of "Student" collection and sort all the documents by name in ascending order and then by age in descending.  
3. Display first five documents of "Student" collection.  
4. Display fourth and fifth documents of "Student" collection.

| <b>Lab-10</b>   | <b>update, delete and rename method</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| <b>Mongo DB</b> | <p><b>Perform the following queries using update, delete, rename and createcollection method:</b></p> <p><b>Part – A (Use collection “Student” created in Lab-9)</b></p> <ol style="list-style-type: none"><li>1. Update the age of John's to 31.</li><li>2. Update the city of all students from 'New York' to 'New Jersey'.</li><li>3. Set isActive to false for every student older than 35.</li><li>4. Increment the age of all students by 1 year.</li><li>5. Set the city of 'Eva' to 'Cambridge'.</li><li>6. Update 'Sophia's isActive status to false.</li><li>7. Update the city field of student aged below 30 to 'San Diego'.</li><li>8. Rename the age field to years for all documents.</li><li>9. Update 'Nick' to make him active (isActive = true).</li><li>10. Update all documents to add a new field country with the value 'USA'.</li><li>11. Update 'David's city to 'Orlando'.</li><li>12. Multiply the age of all students by 2.</li><li>13. Unset (remove) the city field for 'Tom'.</li><li>14. Add a new field premiumUser and to true for users older than 30.</li><li>15. Set isActive to true for 'Jane'.</li><li>16. Update isActive field of 'Lucy' to false.</li><li>17. Delete a document of 'Nick' from the collection.</li><li>18. Delete all students who are inactive (isActive = false).</li><li>19. Delete all students who live in 'New York'.</li><li>20. Delete all the students aged above 35.</li><li>21. Delete a student named "Olivia" from the collection.</li><li>22. Delete all the students whose age is below 25.</li><li>23. Delete the first student whose isActive field is true.</li><li>24. Delete all students from 'Los Angeles'.</li><li>25. Delete all students who have city field missing.</li><li>26. Rename 'city' field to 'location' for all documents.</li><li>27. Rename the name field to FullName for 'John'.</li><li>28. Rename the isActive field to status for all documents.</li><li>29. Rename age to yearsOld for everyone from 'San Francisco' student only.</li><li>30. Create a Capped Collection named “Employee” as per follows:<ol style="list-style-type: none"><li>a. Ecode and Ename are compulsory fields</li><li>b. Datatype of EID is int, Ename is string, Age is int and City is string</li></ol></li></ol> <p>Insert following documents into above “Employee” collection.</p> <pre>{"Ecode": 1, "Ename": "John"}<br/>{"Ecode": 2, "Ename": "Jane", "age": 25, "city": "Los Angeles"}<br/>{"Ecode": 3, "Ename": "Tom", "age": 35}<br/>{"Ecode": 4, "Ename": "Lucy", "age": 28, "city": "San Francisco", "isActive": true}</pre> |

{"Ename": "Dino"}

**Part – B Create collection named “Student\_data” and insert following 10 documents into it.**

| Student_data |         |            |       |     |        |           |
|--------------|---------|------------|-------|-----|--------|-----------|
| ROLLNO       | SNAME   | DEPARTMENT | FEES  | SEM | GENDER | CITY      |
| 101          | Vina    | CE         | 15000 | 3   | Female | Rajkot    |
| 102          | Krishna | EC         | 8000  | 5   | Female | Ahmedabad |
| 103          | Priti   | Civil      | 12000 | 7   | Female | Baroda    |
| 104          | Mitul   | CE         | 15000 | 3   | Male   | Rajkot    |
| 105          | Keshav  | CE         | 15000 | 3   | Male   | Jamnagar  |
| 106          | Zarna   | Civil      | 12000 | 5   | Female | Ahmedabad |
| 107          | Nima    | EE         | 9000  | 5   | Female | Rajkot    |
| 108          | Dhruv   | Mechanical | 10000 | 5   | Male   | Rajkot    |
| 109          | Krish   | Mechanical | 10000 | 7   | Male   | Baroda    |
| 110          | Zeel    | EE         | 9000  | 3   | Female | Jamnagar  |

**From the above given “Student\_data” collection perform the following queries:**

1. Display Female students and belong to Rajkot city.
2. Display students not studying in 3<sup>rd</sup> sem.
3. Display students whose city is Jamnagar or Baroda. (use: IN)
4. Display first 2 students names who lives in Baroda.
5. Display Male students who studying in 3<sup>rd</sup> sem.
6. Display sname and city and fees of those students whose roll no is less than 105.
7. Update City of all students from 'Jamnagar' City and Department as 'CE' to 'Surat'.
8. Increase Fees by 500 where the Gender is not 'Female'. (Use: Not)
9. Set the Department of all students from 'EE' and in Sem 3 to 'Electrical'.
10. Update the Fees of students in 'Rajkot' who are male.
11. Change City to 'Vadodara' for students in Sem 5 and with fees less than 10000.
12. Delete all students where the City is 'Ahmedabad' or GENDER is 'Male'.
13. Delete students whose Rollno is not in the list [101, 105, 110].
14. Delete students from the 'Civil' department who are in Sem 5 or Sem 7.
15. Delete all students who are not in the cities 'Rajkot', 'Baroda', or 'Jamnagar'.
16. Delete students whose Rollno is between 105 and 108.
17. Rename the City field to LOCATION for all students.
18. Rename the Department field to Branch where the Fees is less than 10000.
19. Rename Sname to Fullname for students with Rollno in [106, 107, 108].
20. Rename Fees to Tuition\_Fees for all students with Fees greater than 9000.
21. Rename Department to Major where the Fees is less than 15000 and Gender is 'Female'.
22. Rename City to Hometown for all students whose SEM is 3 and Department is not 'Mechanical'.

**Part – C**

1. Create a capped collection named "logs" with a maximum size of 100 KB and a maximum of 10 documents.
2. Insert below 12 log entries into the "logs" collection. Each entry should contain a message, level (e.g., "info", "warning", "error"), and a timestamp field. Use the insertMany() method.
 

```
{ message: "System started", level: "info", timestamp: new Date() }
{ message: "Disk space low", level: "warning", timestamp: new Date() }
{ message: "User login", level: "info", timestamp: new Date() }
```

3. Calculate the total sales of all companies.
4. Find the average profit for companies in each sector.
5. Get the count of companies in each sector/
6. Find the company with the highest PE ratio.
7. Filter companies with PE ratio greater than 20.(Use: Aggregate)
8. Calculate the total profit of companies with sales greater than 250,000.
9. Project only the company name and profit fields.(Use: Aggregate)
```

10. Find companies where EPS is greater than the average EPS.
11. Group companies by sector and get the maximum sales in each sector.
12. Calculate the total sales and total profit of companies in each sector.
13. Sort companies by profit in descending order.(Use: Aggregate)
14. Find the average ROE across all companies.
15. Group companies by sector and calculate both the minimum and maximum EPS.

**Part – C**

1. Count the number of companies with profit greater than 30,000.
2. Get the total profit by sector and sort by descending total profit.
3. Find the top 3 companies with the highest sales.
4. Calculate the average PE ratio of companies grouped by sector.
5. Get the sum of sales and profit for each company.
6. Find companies with sales less than 400,000 and sort them by sales.
7. Group companies by sector and find the total number of companies in each sector.
8. Get the average ROE for companies with sales greater than 200,000.
9. Find the maximum profit in each sector.
10. Get the total sales and count of companies in each sector.
11. Project fields where profit is more than 20,000 and only show company and profit.
12. Find companies with the lowest ROE and sort them in ascending order.(Use: Aggregate)

|                 |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

| <b>Lab-13</b>   | <b>Index, Cursor and Schema Validation</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| <b>Mongo DB</b> | <p><b>Perform the following queries on Index, Cursor, Schema Validation, Embedded and Multivalued Documents:</b></p> <p><b>Part – A (Use collection “Stock” created in Lab-12)</b></p> <ol style="list-style-type: none"><li>1. Create an index on the company field in the stocks collection.</li><li>2. Create a compound index on the sector and sales fields in the stocks collection.</li><li>3. List all the indexes created on the stocks collection.</li><li>4. Drop an existing index on the company field from the stocks collection.</li><li>5. Use a cursor to retrieve and iterate over documents in the stocks collection, displaying each document.</li><li>6. Limit the number of documents returned by a cursor to the first 3 documents in the stocks collection.</li><li>7. Sort the documents returned by a cursor in descending order based on the sales field.</li><li>8. Skip the first 2 documents in the result set and return the next documents using the cursor.</li><li>9. Convert the cursor to an array and return all documents from the stocks collection.</li><li>10. Create a collection named "Companies" with schema validation to ensure that each document must contains a company field (string) and a sector field (string).</li></ol> <p><b>Part – B</b></p> <ol style="list-style-type: none"><li>1. Create a collection named "Scripts" with validation for fields like eps, pe, and roe to ensure that they are numbers and required/compulsory fields.</li><li>2. Create a collection named "Products" where each product has an embedded document for manufacturer details and a multivalued field for categories that stores an array of category names the product belongs to.<ul style="list-style-type: none"><li>• manufacturer details: The manufacturer will be an embedded document with fields like name, country, and establishedYear.</li><li>• categories: The categories will be an array field that holds multiple values. (i.e. Electronics, Mobile, Smart Devices).</li></ul></li></ol> |

**Part – C**

1. Create a collection named "financial\_Reports" that requires revenue (a positive number) but allows optional fields like expenses and netIncome (if provided, they should also be numbers).
2. Create a collection named "Student" where each student has name and address are embedded document and mobilenumbers and emailaddress are multivalued field that stores an array of values.
